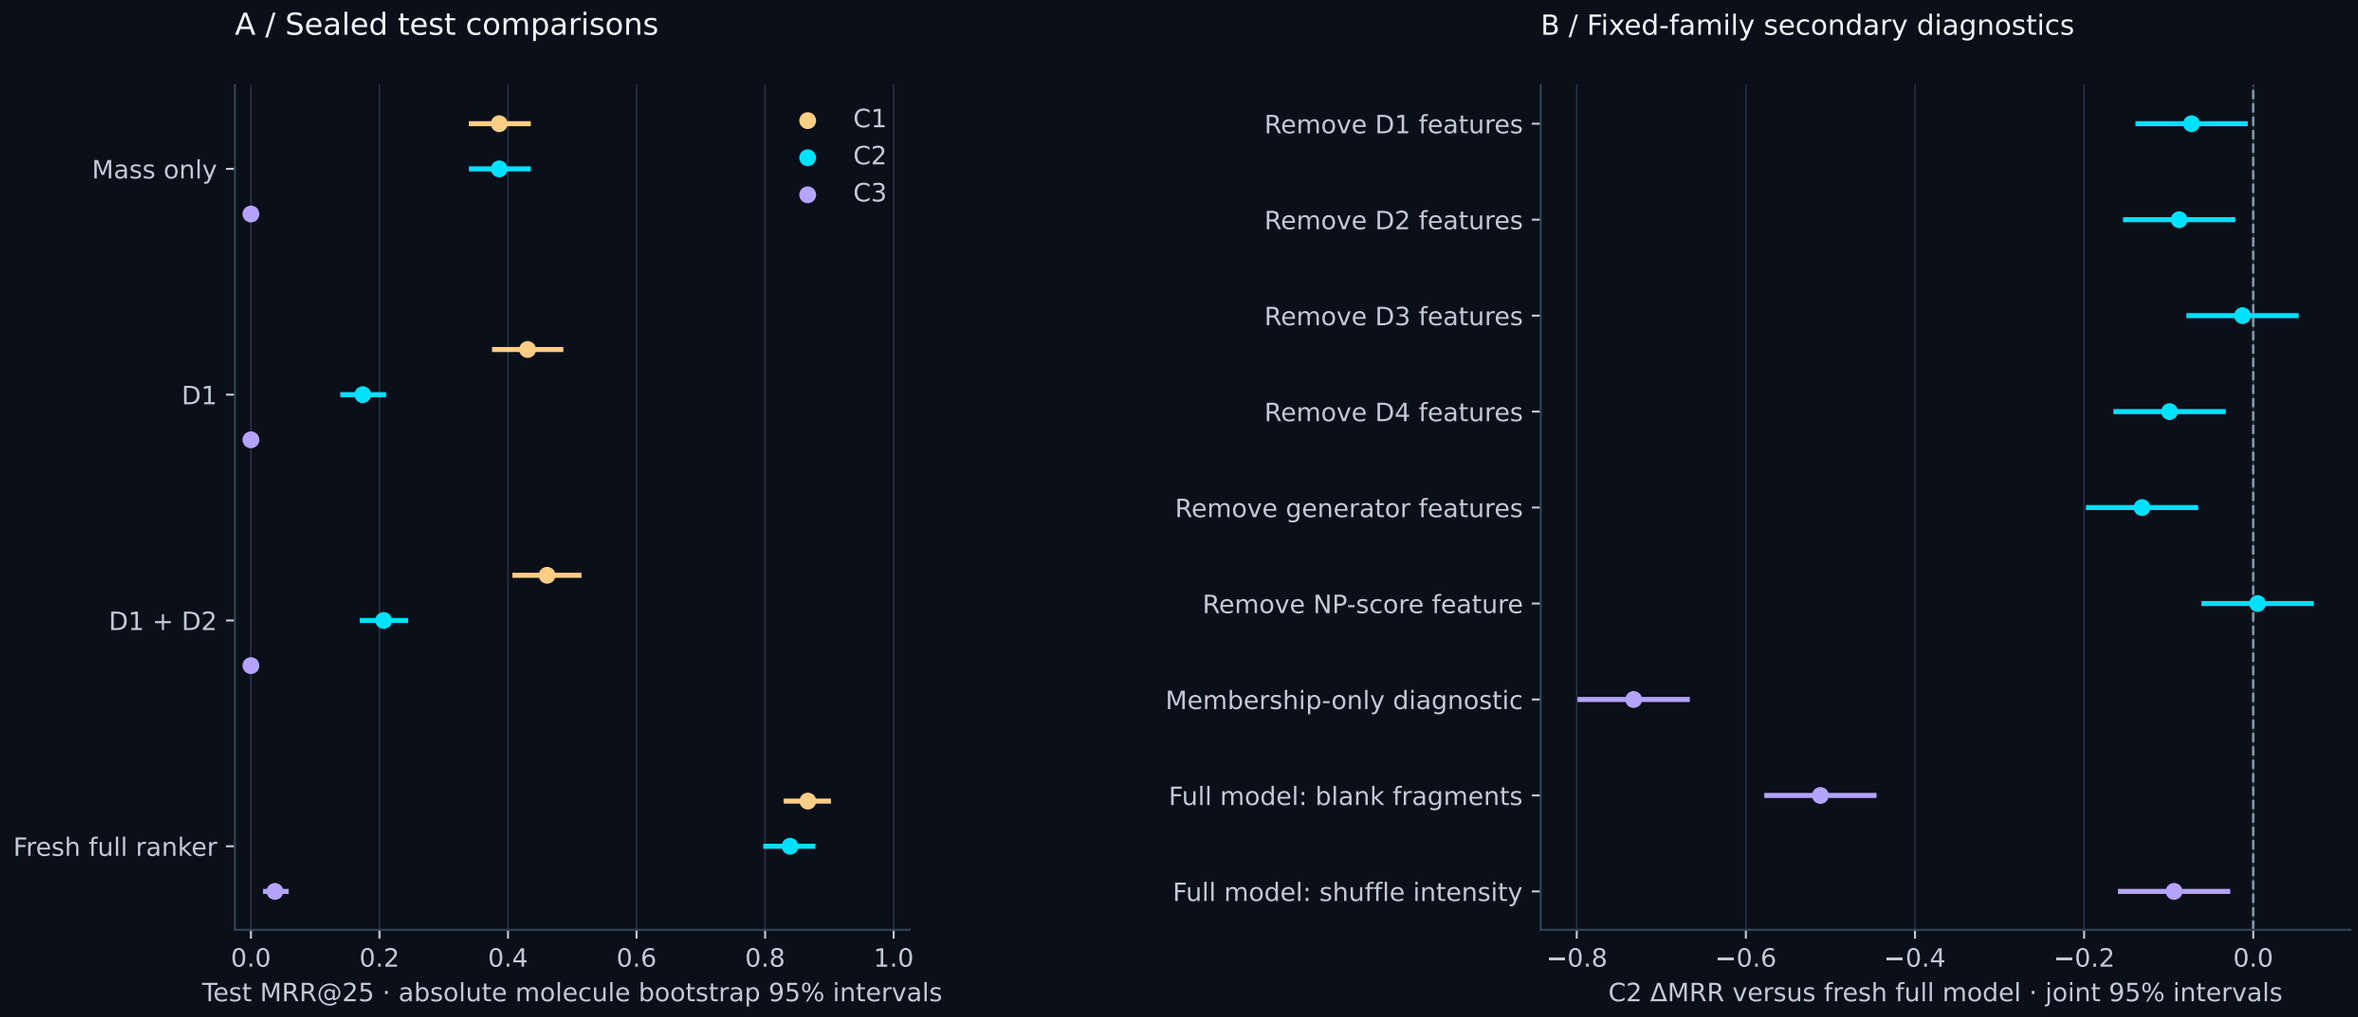
NEXUS / CASMI26

Fresh training · internal chemical-family holdout

600 train / 150 development / 250 test queries · all learned fingerprint/ranker weights fitted from scratch



Primary C2 full − D1+D2: +0.6322 [+0.5816, +0.6829]

Internal query-family separation; retrieval references remain task-defined. Fixed candidate universe for feature ablations.
Not external laboratory validation or a competition score. Source: verified reports/advanced_study.json.
